Hi Walter,

I saw you remarks in

<https://edms.cern.ch/document/522768/1/TAB3>

<https://edms.cern.ch/document/522770/1/TAB3>

<https://edms.cern.ch/document/522767/1/TAB3>

these cables ARE NOT the TRIGGER RPC cables as you wrote.  
They are the barrel dcs and t-sens signal cables (that means no power and heat) as described in the 'used in' tab

<https://edms.cern.ch/document/522768/1/TAB4>

<https://edms.cern.ch/document/522770/1/TAB4>

<https://edms.cern.ch/document/522767/1/TAB4>

The cable which you are speking about is (NOVACAVI trigger cable)

<https://edms.cern.ch/document/520458/1/TAB3>

<https://edms.cern.ch/document/520458/1/TAB4>

Please, being EDMS an official documentation site I think it is better to ask directly by e-mail or phone for this kind of questions because now I cannot reply putting a comment (Approval stopped).

Cheers, Fabio
